3. They were still improving the outer end of the quay. The ferry berth was not observed to be in use but a boat with workers on it often put in right nearby. There were no factory installations on the quay side

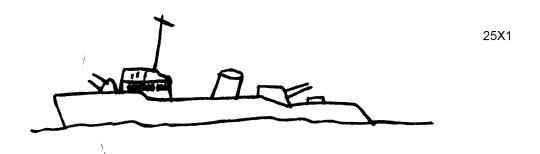

At the shipping office there was something which resembled an expansion plan for the port of Onega with large buildings sketched in.

4. Inspection was very superficial on arrival in Onega. On departure, the crew was mustered amidships and the cabins and engine room were inspected. All lighters which came with lumber to the loading place were very carefully inspected. The soldiers who made the inspection were equipped with steel bars. They always searched below deck.
